

How to set artwork up for....

Print & Cut Vinyl

For printed and cut vinyl we print your image onto self adhesive vinyl and then load into our vinyl cutter. To do this we need a file with both the image file in one layer and the outline to cut in another layer. Save your files in illustrator as an .ai file or an .eps (CS4).

The example above shows a star sticker to be printed and cut. We would switch the cutter guide layer off. Save a copy of your file and print the starry background and white outline. We would then use your cutter guide to cut the sticker in a star shape.

Note the white bleed around the outside of the cutter guide, please set your artwork up with 3mm bleed. The background image should be no less than 110dpi at full size.
